Profile Summary

- Motivated and detail-oriented Computer Science and Engineering undergraduate seeking a challenging good job Where I can apply my programming skills to the real world projects.
- Proficient in various programming languages and tools, with experience in web development.
- Successfully delivered impactful academic projects, including an Restaurant Management System and an Microcontroller based Heart Rate Monitor, demonstrating innovation, problem-solving, and technical proficiency.

Relevant Coursework

- Web development
- Database Management system
- Programming languages
- AI
- Machine Learning
- Generative AI

Projects

Drishti AI – Real-Time Yoga Pose Detection & Correction System

Mar 2026

- Developed a real-time AI-based system for human pose detection and posture correction using computer vision techniques
- Built a low-latency video streaming pipeline using WebSockets for continuous frame transmission between frontend and backend
- Performed model inference using MoveNet (TFLite) to extract 17 body keypoints from video frames
- Implemented pose classification model using TensorFlow/Keras based on keypoint data
- Designed a pose evaluation system using joint angle calculations to generate real-time corrective feedback
- Applied data smoothing techniques to reduce noise in model predictions and improve stability
- Developed backend APIs using FastAPI for real-time data processing and communication
- Implemented user authentication, session tracking, and performance analytics using Firebase
- Generated automated performance reports using PDF generation tools

Restaurant Management System

May 2024

- During my academic project, we designed and implemented a comprehensive DBMS project to streamline the management of restaurant facilities and developed a robust database schema to efficiently manage data related to order adding, order checkout, menu view. Built a dyamic web interface for user friendly interactions with students and administration using **HTML** and **CSS**. Integrated **MySQL** and retrieval, enhancing system performance and reliability.

Microcontroller: Heart Rate Monitor

April 2024

- A **microcontroller-based heart monitor** is a compact, low-cost medical device designed to measure and monitor a person’s heart activity in real-time. It uses sensors (such as ECG electrodes or photoplethysmography sensors) to detect heart signals and then processes the data using a microcontroller like Arduino, PIC, or ARM-based boards.

Technical Skills

Programming Languages: Python, Java

Frameworks & Libraries: FastAPI, TensorFlow, Keras, OpenCV, React.js

Technologies: WebSockets, REST APIs, Firebase, MySQL

Core Concepts: Computer Vision, Machine Learning, Real-Time Systems, API Development, Data Processing

Education

S G Balekundri Institute of Technology, Belagavi

Bachelor of Engineering - CGPA: 8.895(till 6th Sem)

Dec 2022-Aug 2026

Belagavi, Karnataka

Swamy Vivekananda Sci PU College, Saundatti

Pre-University - Result: 88.83%

June 2020- April 2022

Hubali, Karnataka

Shri Kumareshwar English Medium School, Saundatti

SSLC- Result: 90.56%

June 2018- April 2020

Saundatti, Karnataka

Extracurricular / Certifications

- Power BI
- SQL Basics Course
